Diagnosis, Assessment & Plan

Free Text A&P:

54 yo RHD male w/ hx of 2002 cholecystectomy w/ apparently complications including pancreatitis treated symptomatically with adhesiolysis performed in the Philippines in 4/2016 here with continued chronic abdominal pain.

#1. Chronic abdominal pain

- Sounds like adhesions could be causative; gen surgery consultation?
- Increase Fentanyl from 50 mcg to 75mcg Q72H
- Start MSIR 30mg Q6H PRN
- DC MS Contin
- Add gabapentin 200mg TID

#2. Opioid dependency

#3. Insomnia

- Start pamelor 25mg QHS

#4. Constipation w/ "mod amount of stool.."

- Uses lactulose containing products at home
- Has PRN suppository

#5. Elevated AST

DISPO. Unusual situation. Not sure what he's planning on doing for living arrangements. He does have SSDisability!. Will continue to monitor response to pain medications.
